

How Does a Touchscreen **FEEL** Your Finger?

**Capacitive Screen = stores electric
charge**

**An invisible electric field covers the
whole screen**

**Your body is 60% water = conducts
electricity!**

**Grid lines pinpoint your finger like a
map**

**Touch controller → finds the point →
tells processor**

**Wool = insulator = no charge = no
touch**

**Charge changes in many spots =
multi-touch!**

**Water conducts too → screen gets
confused**

Charge → Finger → Grid → Chip → Tap!

Quick Brain Check! Pause & Think (3 Qs)

Answers: Charge

Insulator blocks flow
