

How Does the Internet Actually Work?

**INTER + NETWORK = A Web of
Computers**

Client asks. Server answers.

Big data → tiny PACKETS

Every device has an address (IP)

DNS = Internet's Phonebook

Routers = Traffic Police of the Net

Common language = PROTOCOLS

HTTPS → your data is locked & safe

All this in under a second!

**Built to survive — data always finds a
way**

Quick Brain Check! □ Pause & Think — 3

Questions

1. Packet switching 2. DNS 3. Secure
