

Why Does the Moon Follow You?

Moon is ~384,000 km away!

**Try it: near = moves a lot, far = barely
moves**

**Near things zoom past. The Moon
doesn't.**

Brain thinks: It's coming with me!

It's all about reference points

Moon is HUGE & bright — easy to track

Far mountains & the Sun do it too

Moon orbits Earth in ~27 days

Bigger distance = stronger illusion

**Our eyes take shortcuts — science finds
the truth**

Quick Brain Check! □ Pause & Think — 3

Questions

1. Parallax 2. ~384,000 km 3. Illusion
