

How Does AI Actually THINK?

AI = a program that LEARNS from DATA

**Show it millions of examples → it finds
patterns**

Neural Network — inspired by your BRAIN

**Billions of WEIGHTS, tuned by every
mistake**

**LLM = predicts the NEXT word, again &
again**

**AI can be confidently WRONG — always
double-check**

**Trained on 1000s of chips — 175B+
parameters**

AI is already ALL around you

**Fast at ONE thing — but no common
sense (yet)**

- 1) AI's brain? 2) What do LLMs predict?**
- 3) Confident wrong answer = ?**

**1) Neural Network 2) The next word 3)
Hallucination**
