

How Do VACCINES Train Your Body?

Your IMMUNE SYSTEM = a 24/7 army

Antigens = ID tags

Antibodies = the weapons

**First attack = SLOW response (days to
react)**

**MEMORY CELLS remember the enemy
forever**

**Vaccine = a safe TRAILER of the real
disease**

**Many types — even mRNA (does NOT
change your DNA)**

HERD IMMUNITY protects everyone

**Smallpox ERADICATED 1980 — millions
of lives saved**

**Recognize → remember → train →
defend → protect all!**

**1) Body's germ-fighting army? 2) Cells
that remember? 3) Community
protection?**

**1) Immune system 2) Memory cells 3)
Herd immunity**
