

Why Do We Have SEASONS?

MYTH: closer = summer (WRONG!)

Real reason = 23.5° axial TILT

Tilt toward Sun = summer

away = winter

Direct rays = concentrated heat

Longer days = more heating time

Solstices & Equinoxes mapped

Equator = steady

Poles = extreme

Hottest day comes LATER (seasonal lag)

No tilt = no seasons!

Quick Brain Check!

1.2.3 → PAUSE

Answers: Tilt •
India=Summer→Aus=Winter • Equator
Steady
