

WHY DO STARS TWINKLE?

**A steady point of light... travelling for
years**

Meet the real culprit: TURBULENCE

REFRACTION = bending of light

Brightness · Position · Color

Like a coin under wavy water

Point vs Disk

**Wobbles average out = planets don't
twinkle**

**More air near the horizon = more
twinkle**

No atmosphere = no twinkle

Adaptive Optics: fixing the wobble

QUICK BRAIN CHECK! — Pause & Think

ANSWERS

**Stars twinkle, planets don't — thanks to
our air! SUBSCRIBE!**
