

Water Is Precious

Water is needed by people, plants, and animals. We use water for drinking, cooking, cleaning, farming, and many other activities. Although Earth has a lot of water, clean drinking water is limited, so we must use it wisely.

Quick check Where does rainwater go after it falls?

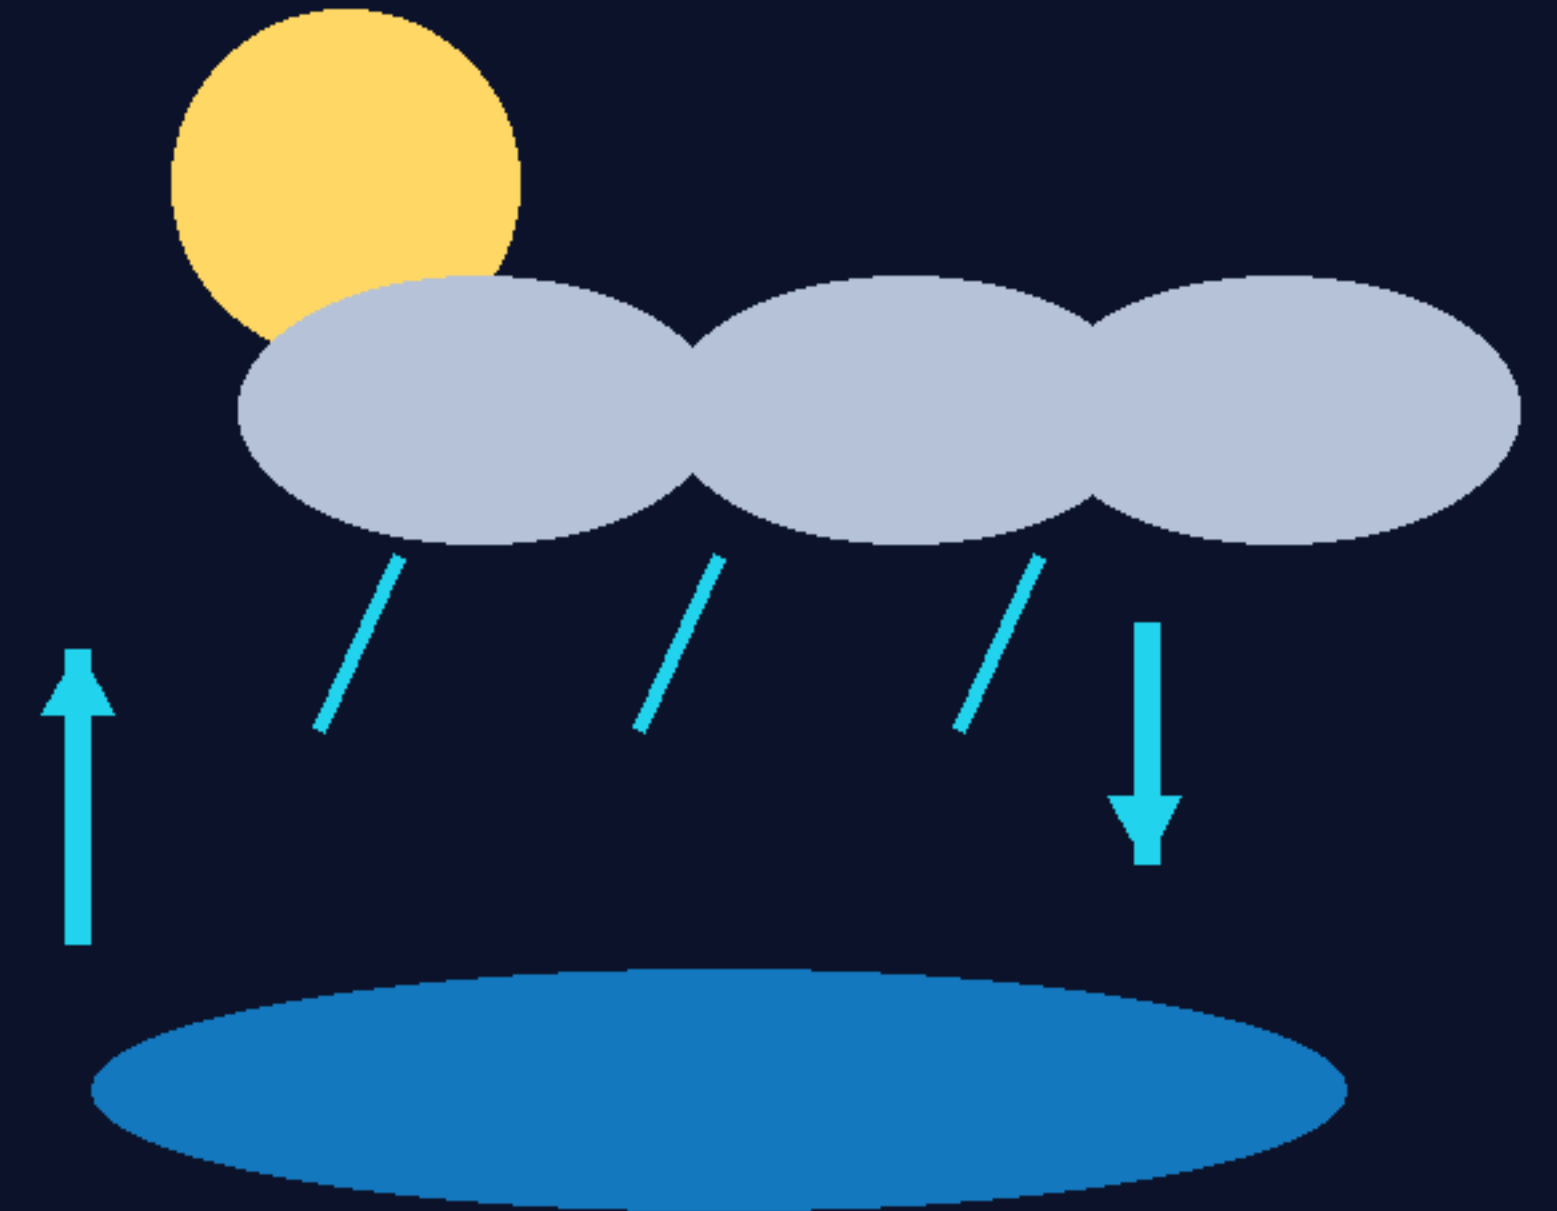

WATER + WEATHER

Sources of Water

We get water from rain, rivers, lakes, ponds, wells, springs, and underground water. In cities, water may come through pipes after treatment. Natural sources must be kept clean and protected.

WATER + WEATHER

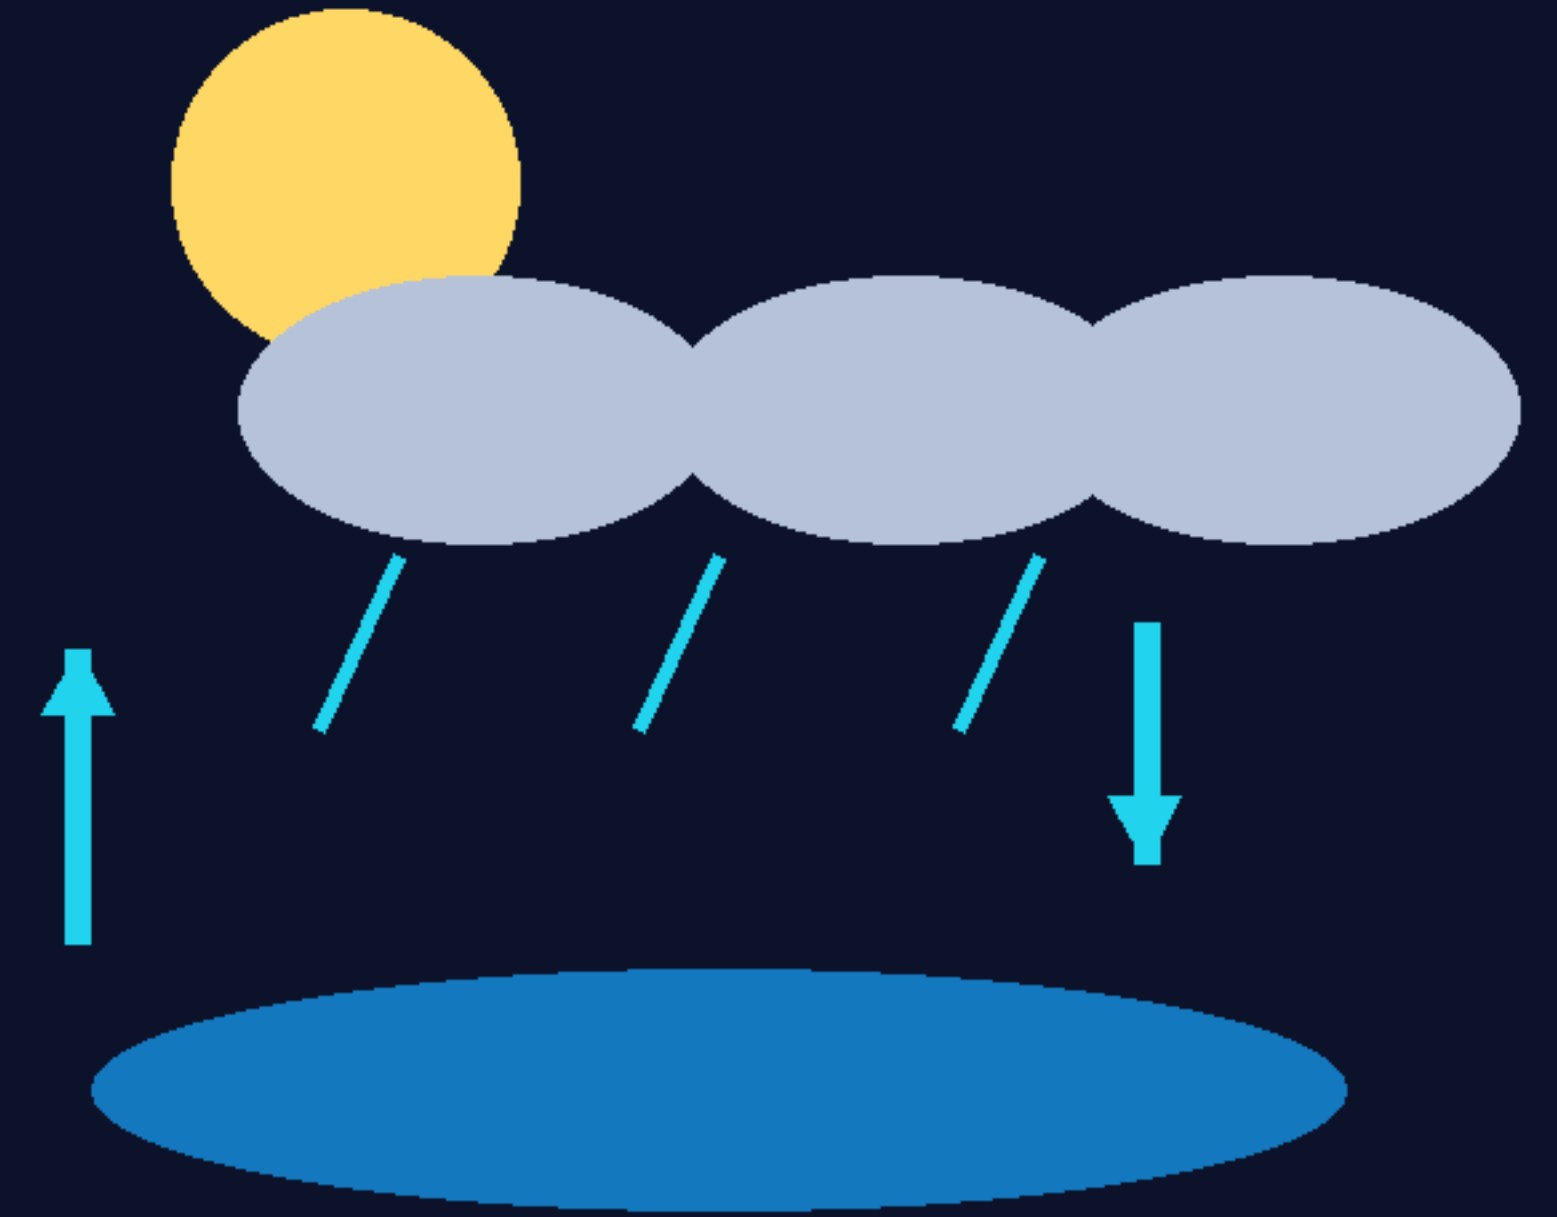

Quick check Where does rainwater go after it falls?

Uses of Water

Water is used at home, school, farms, hospitals, and factories. Plants need water to grow. Animals need water to live. Farmers need water for crops. Every day, our life depends on water in many ways.

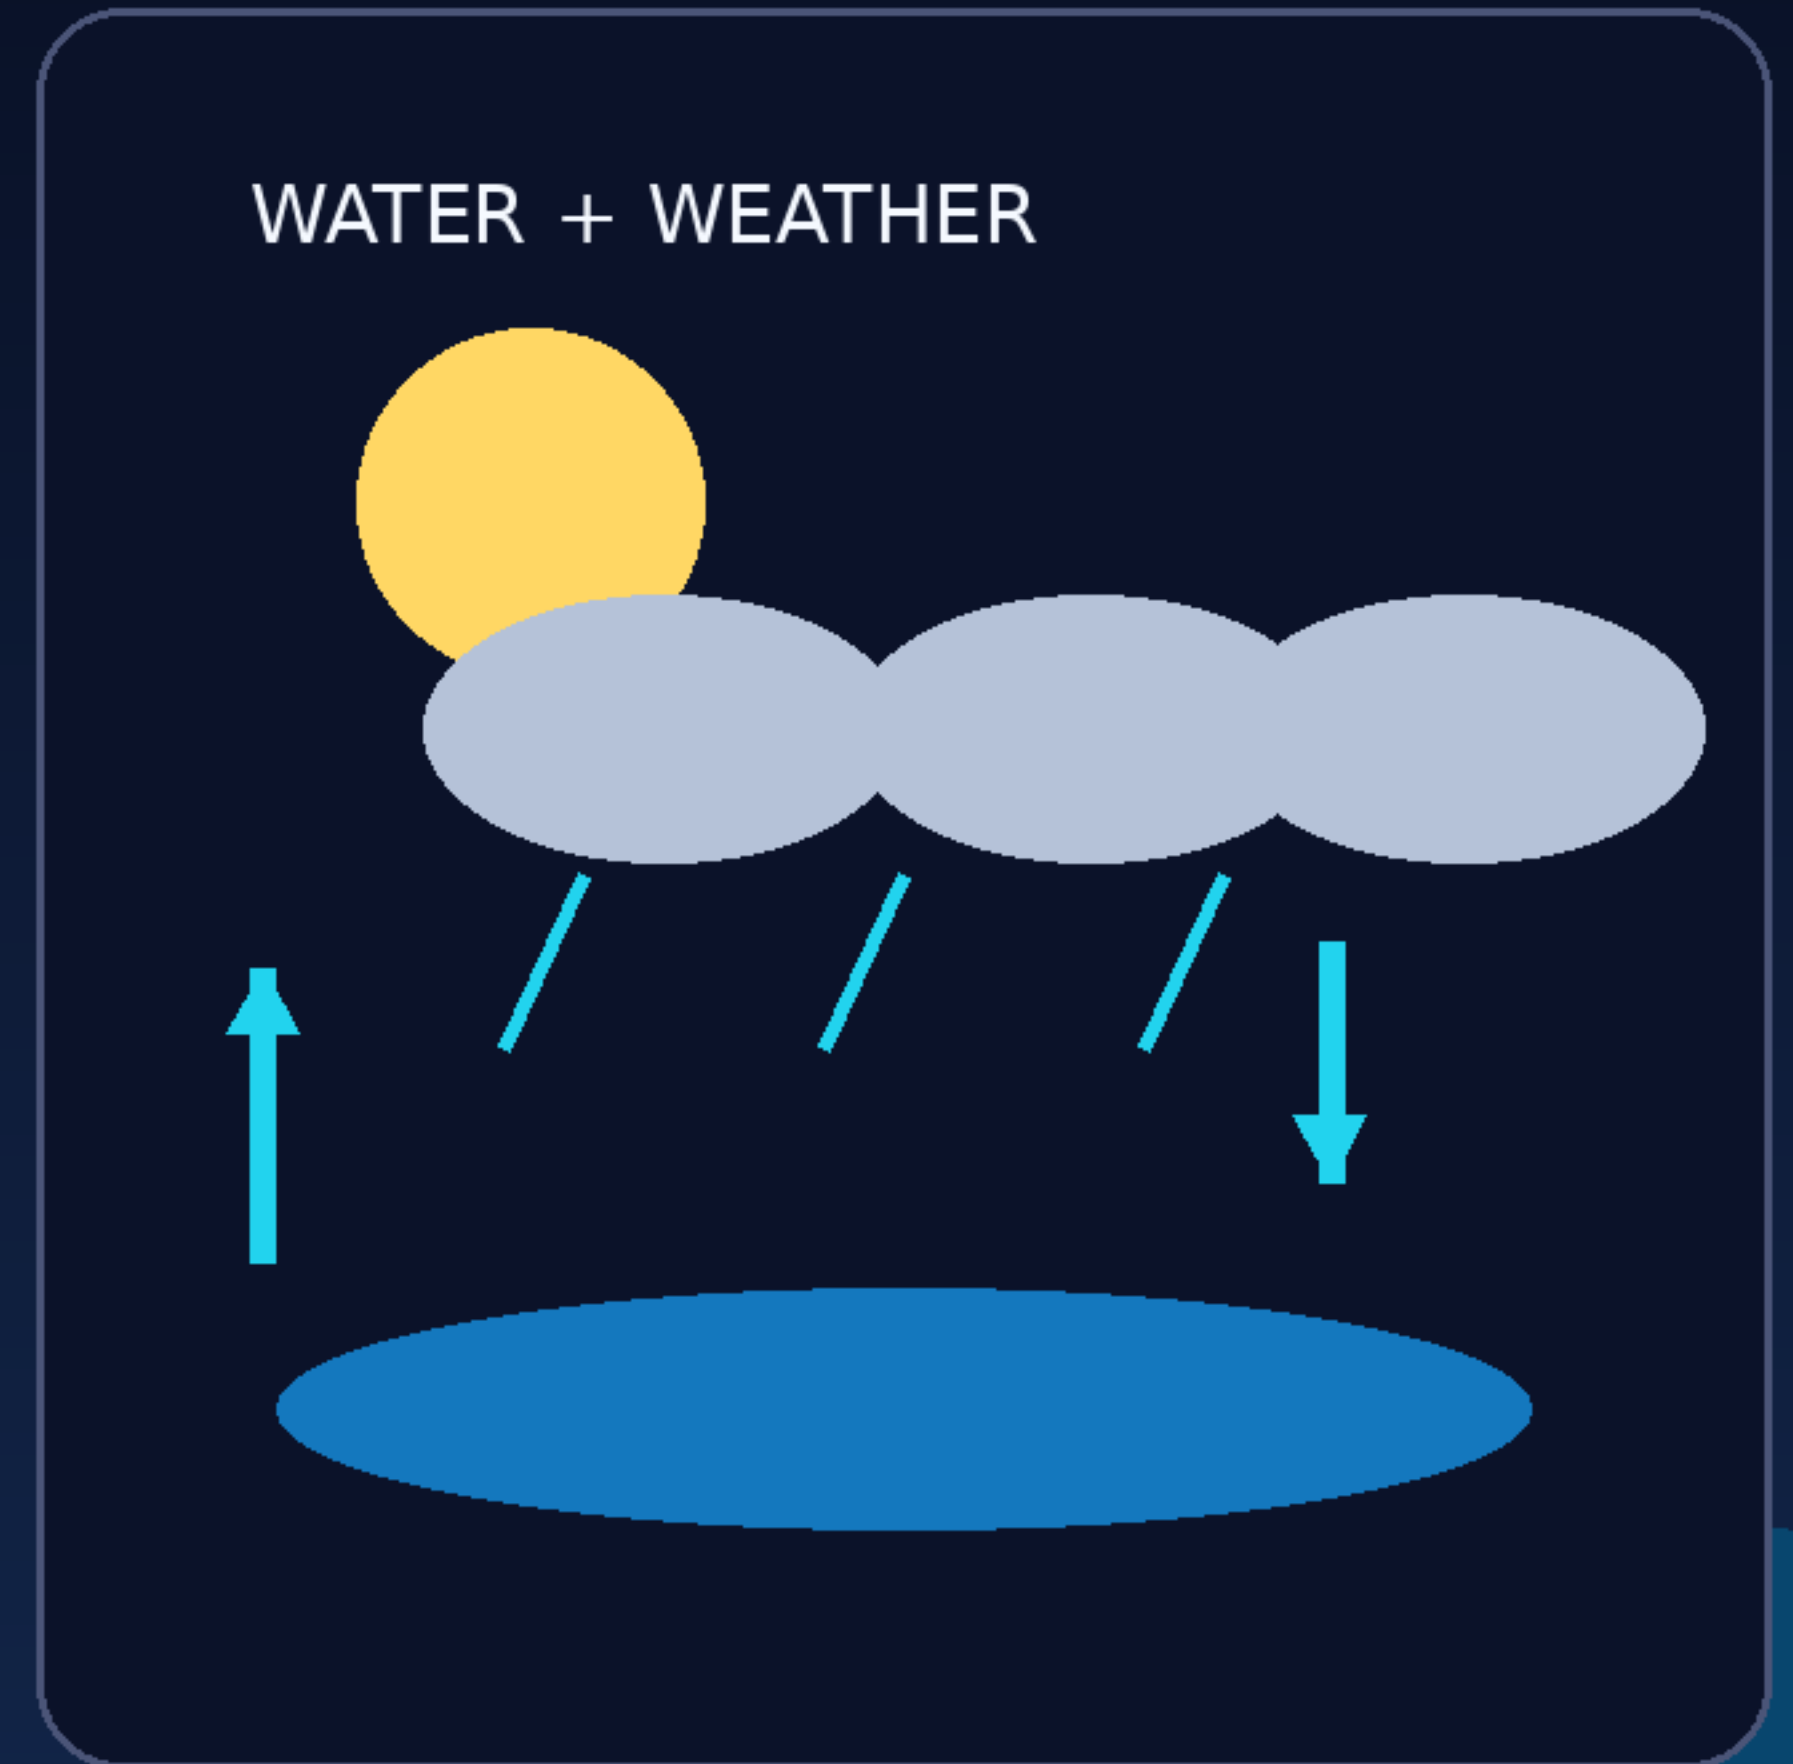

WATER + WEATHER

Quick check: Where does rainwater go after it falls?

Water Cycle

The water cycle shows how water moves. The Sun heats water and changes it into vapour. Vapour cools and forms clouds. Then rain brings water back to Earth. This process repeats again and again.

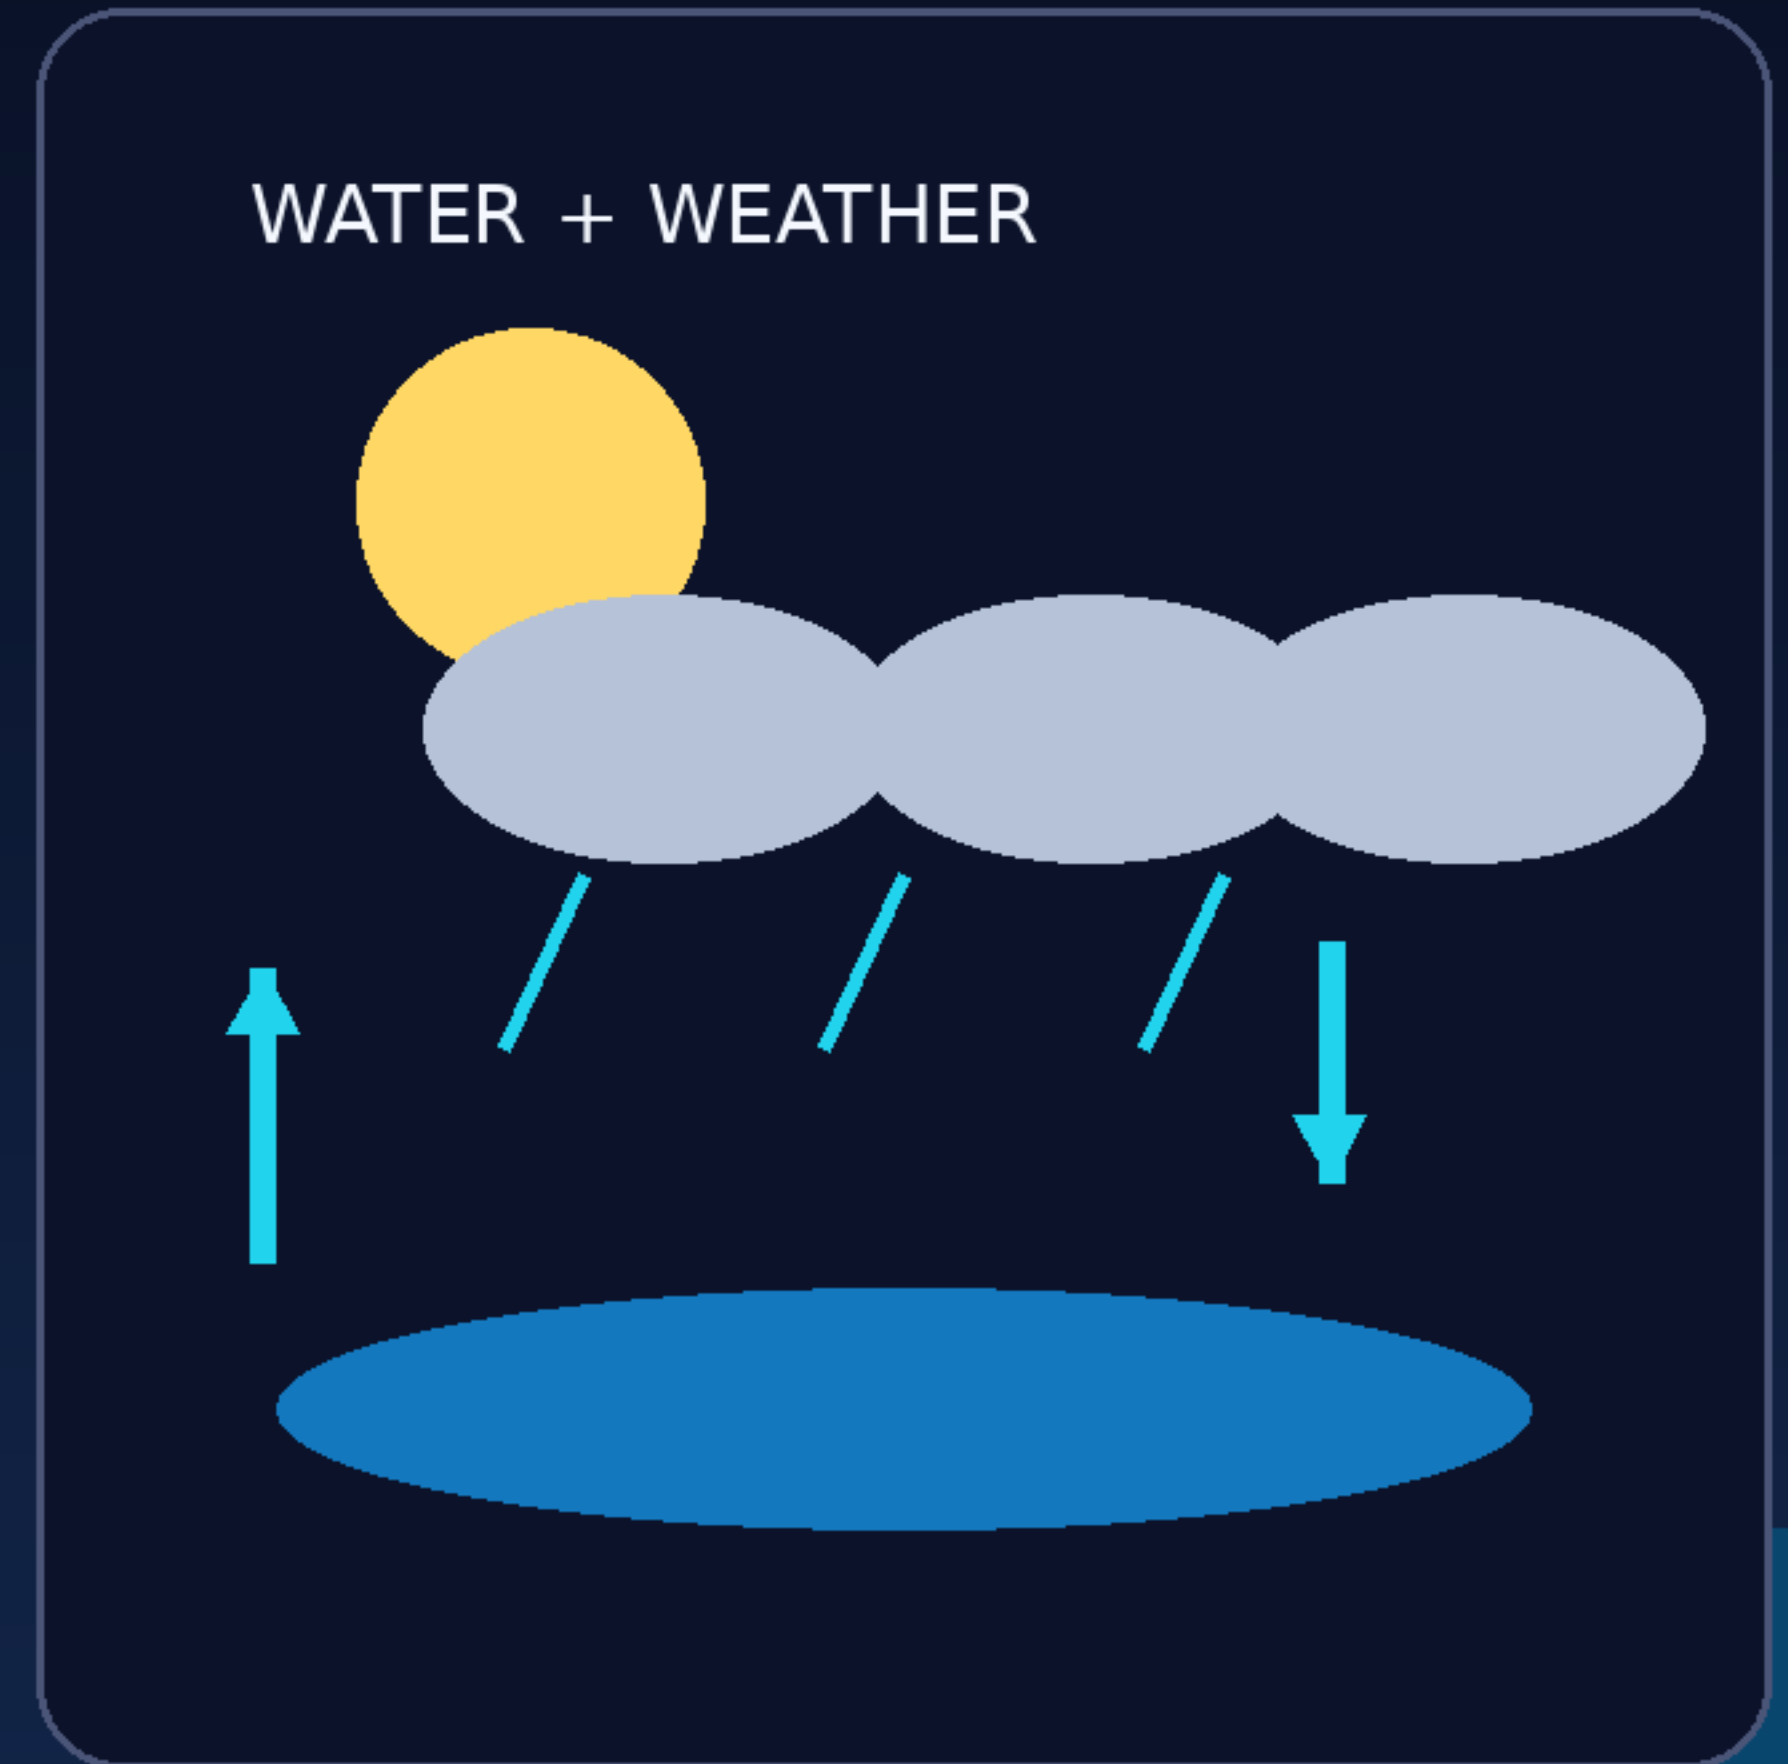

Quick check Where does rainwater go after it falls?

Evaporation

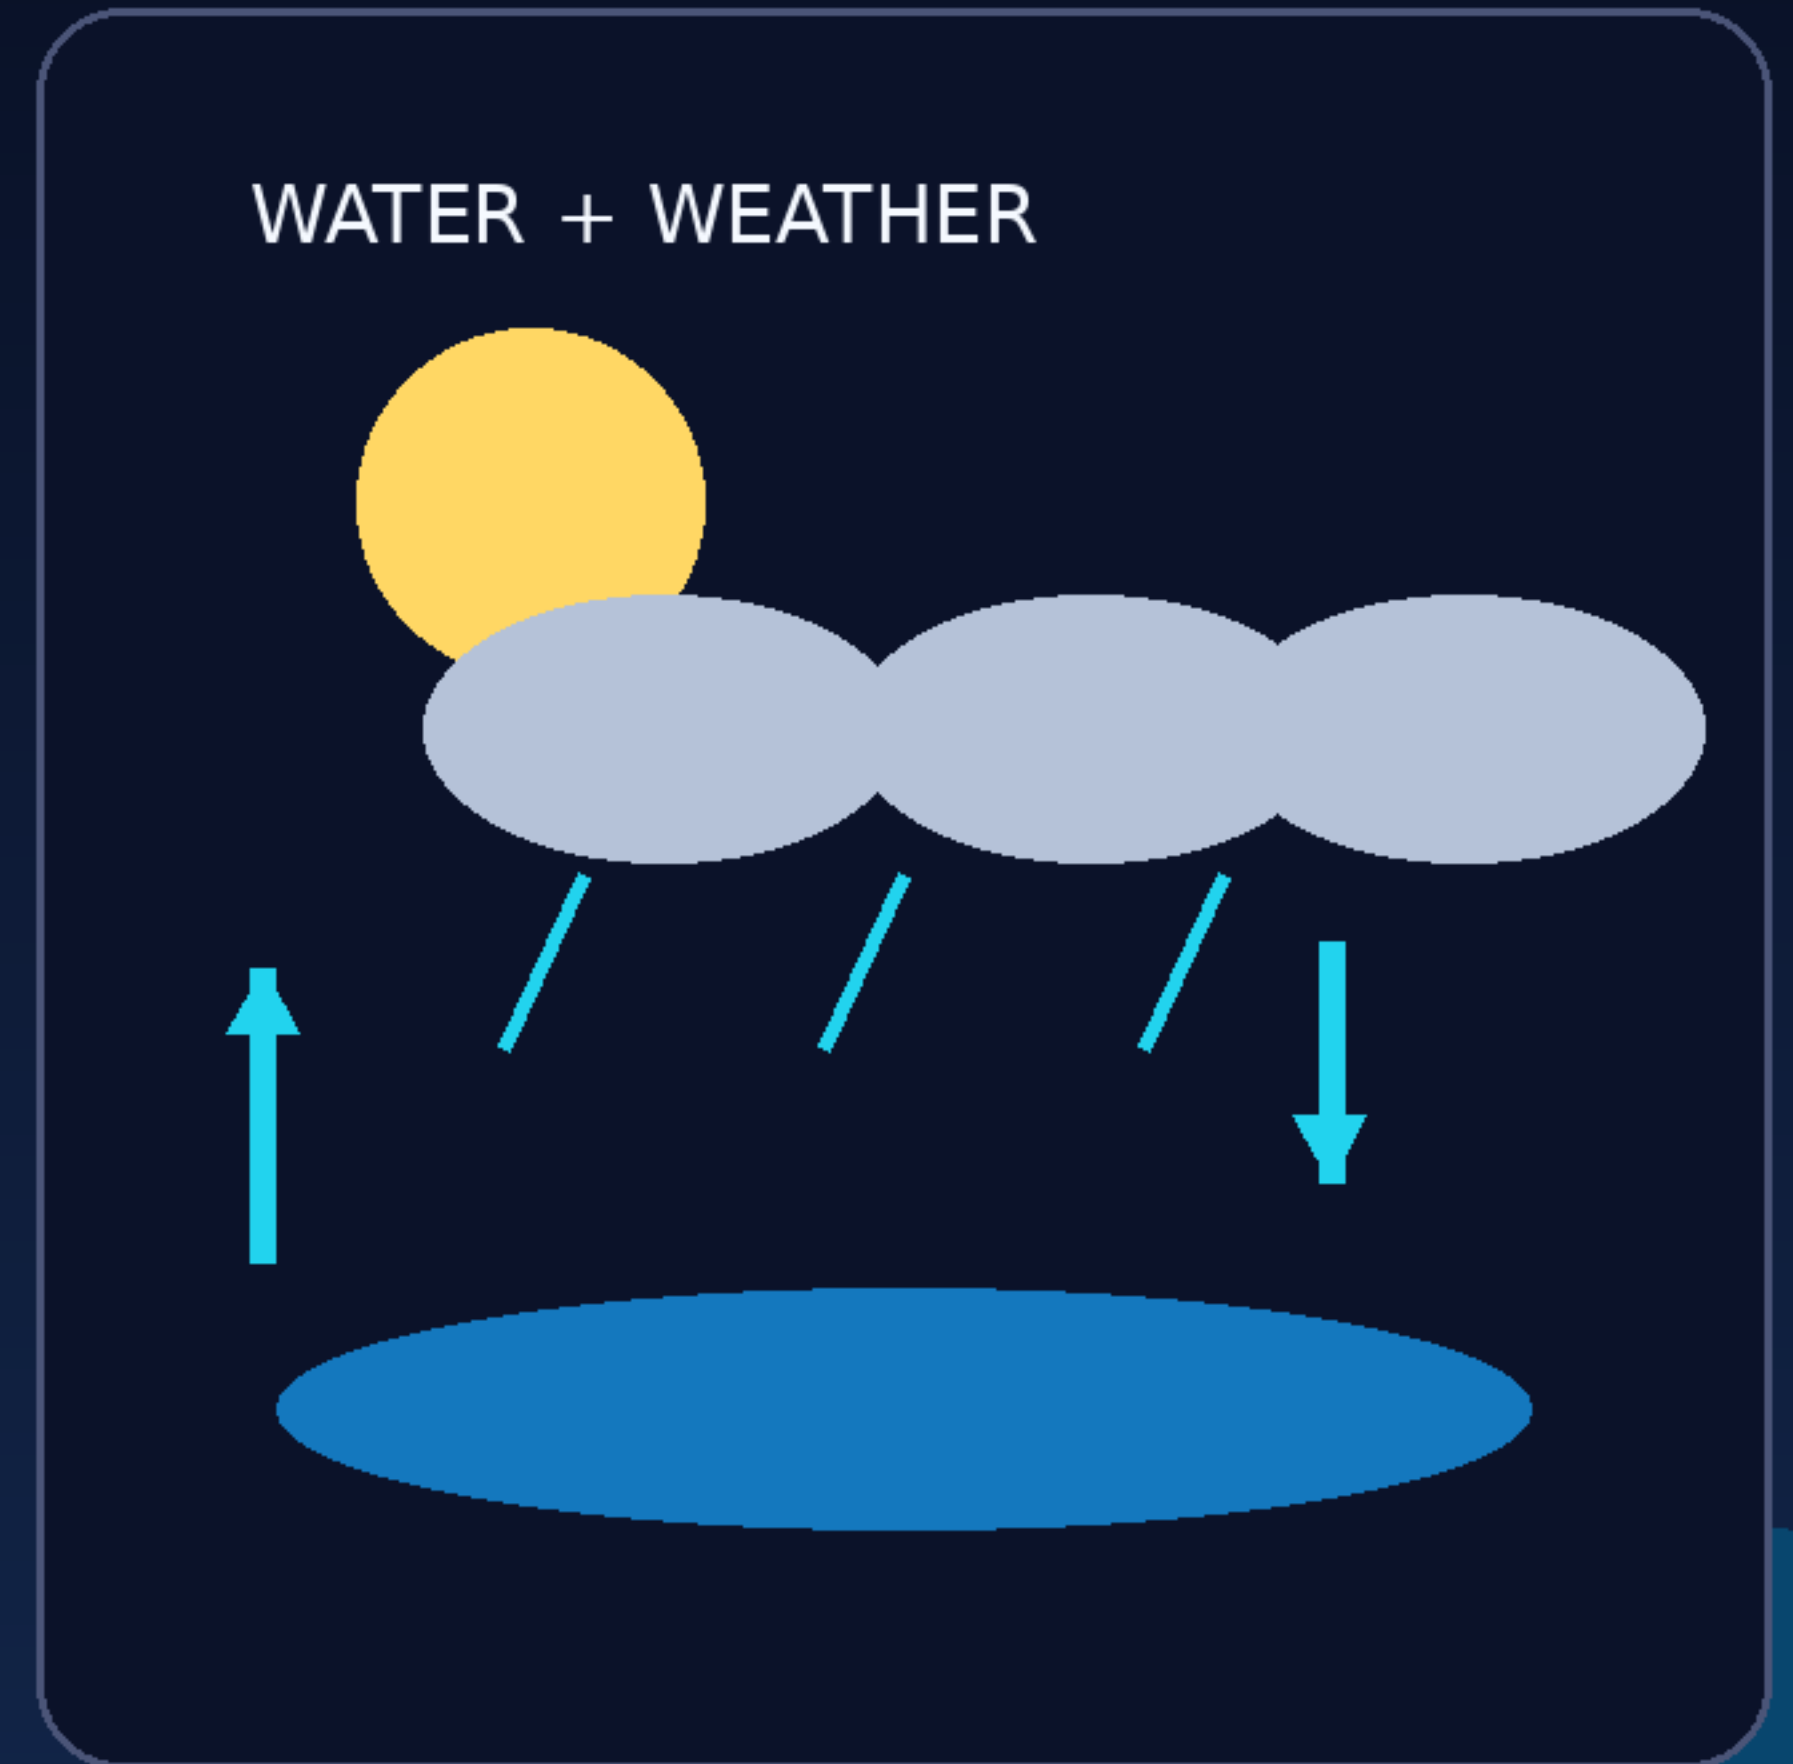

Evaporation happens when liquid water changes into water vapour. Wet clothes dry because water evaporates. Puddles disappear after sunny weather because the Sun warms the water and changes it into vapour.

Quick check Where does rainwater go after it falls?

Condensation and Rain

Condensation happens when water vapour cools and becomes tiny water drops. These drops form clouds. When clouds become heavy, water falls as rain. Rain fills rivers, ponds, soil, and underground water.

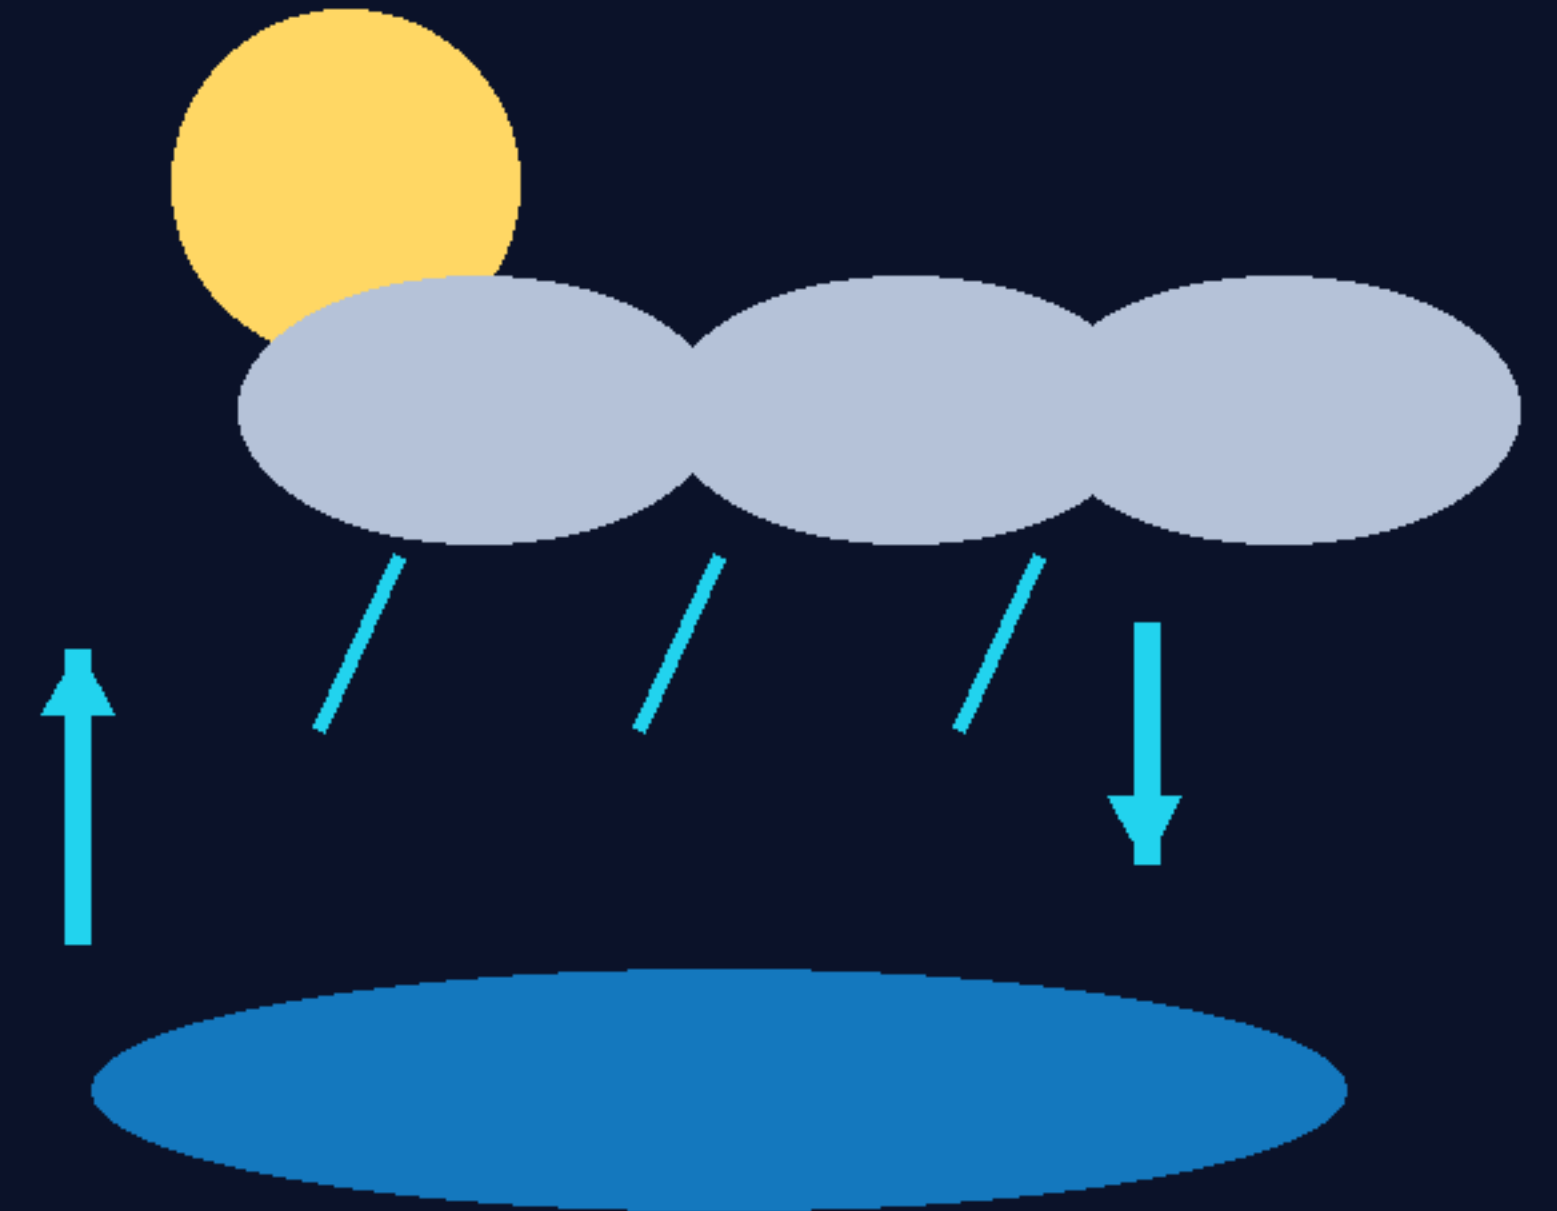

Quick check Where does rainwater go after it falls?

Weather

Weather tells us how the air is outside today. It may be sunny, cloudy, rainy, windy, hot, or cold. Weather can change quickly. We choose clothes, umbrellas, and outdoor plans based on weather.

WATER + WEATHER

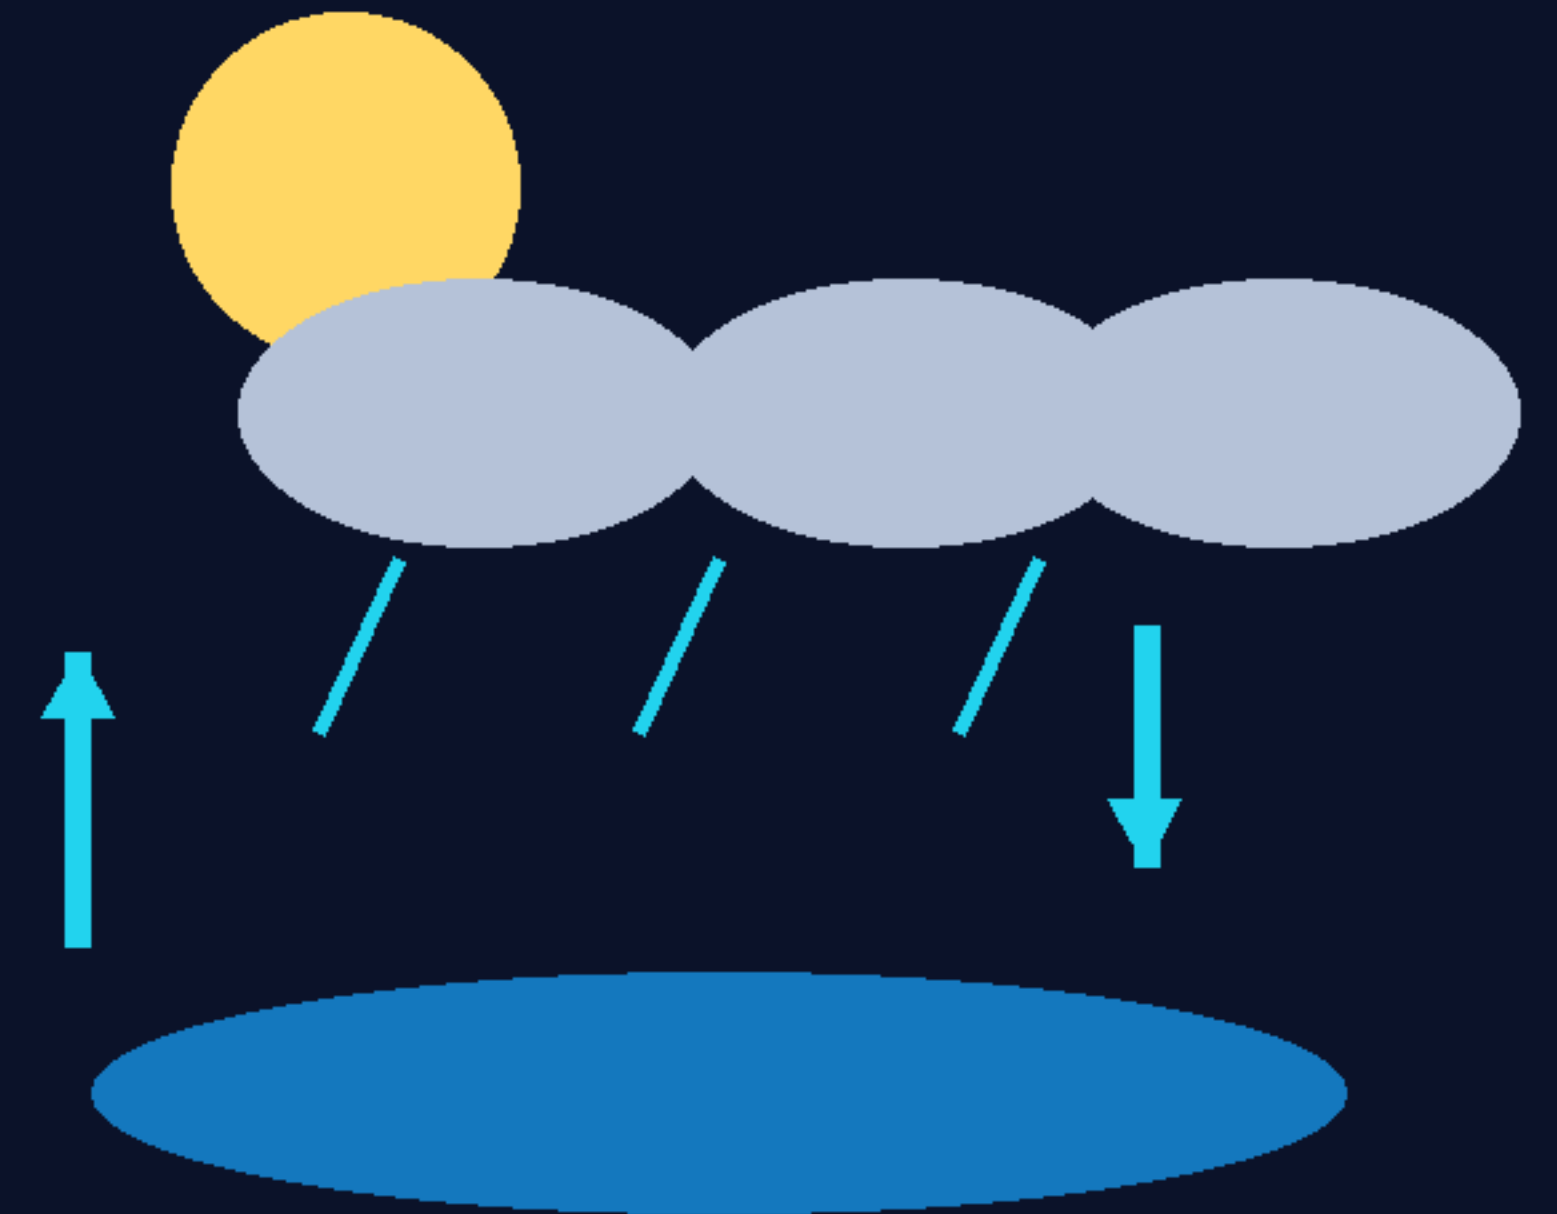

Quick check: Where does rainwater go after it falls?

Seasons

Seasons are longer weather patterns. Many places have summer, rainy season, winter, and spring-like changes. Seasons affect food, clothing, farming, festivals, and the activities people do.

WATER + WEATHER

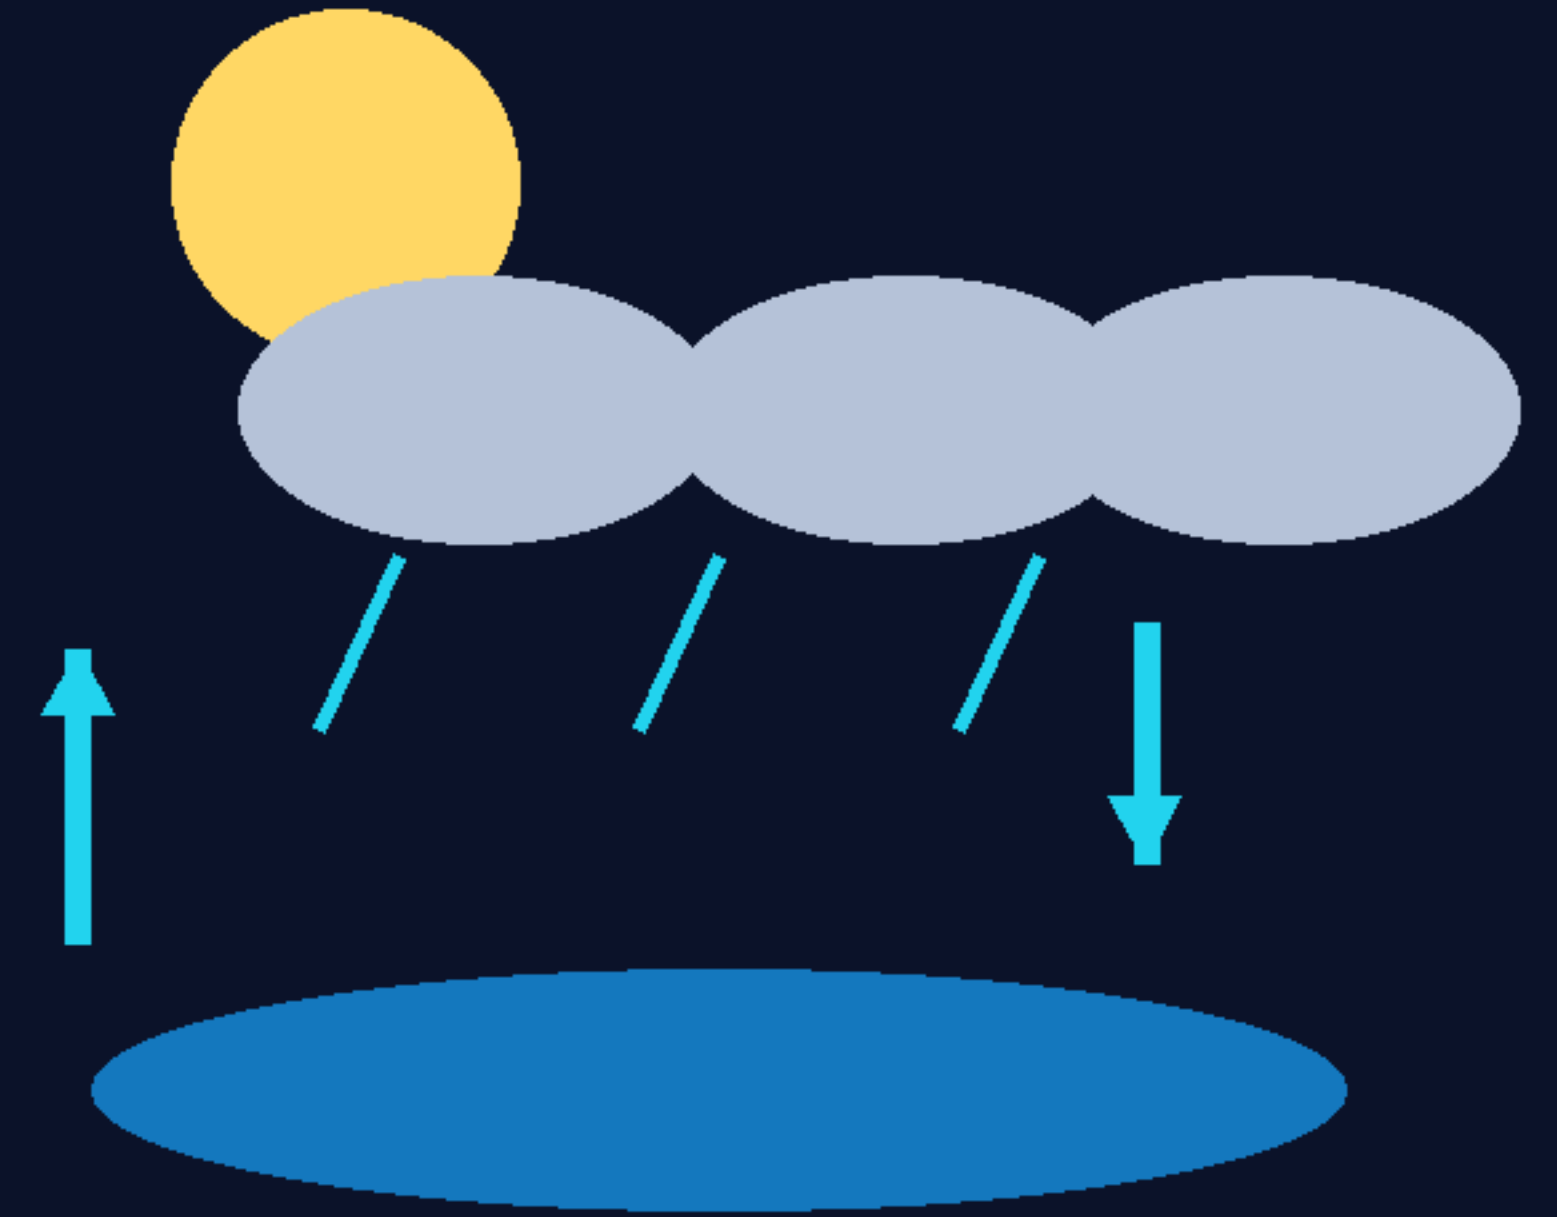

Quick check: Where does rainwater go after it falls?

Clean Air

Air is all around us. We need clean air to breathe. Smoke, dust, and harmful gases make air dirty. Planting trees, reducing smoke, and using cleaner transport help protect air quality.

WATER + WEATHER

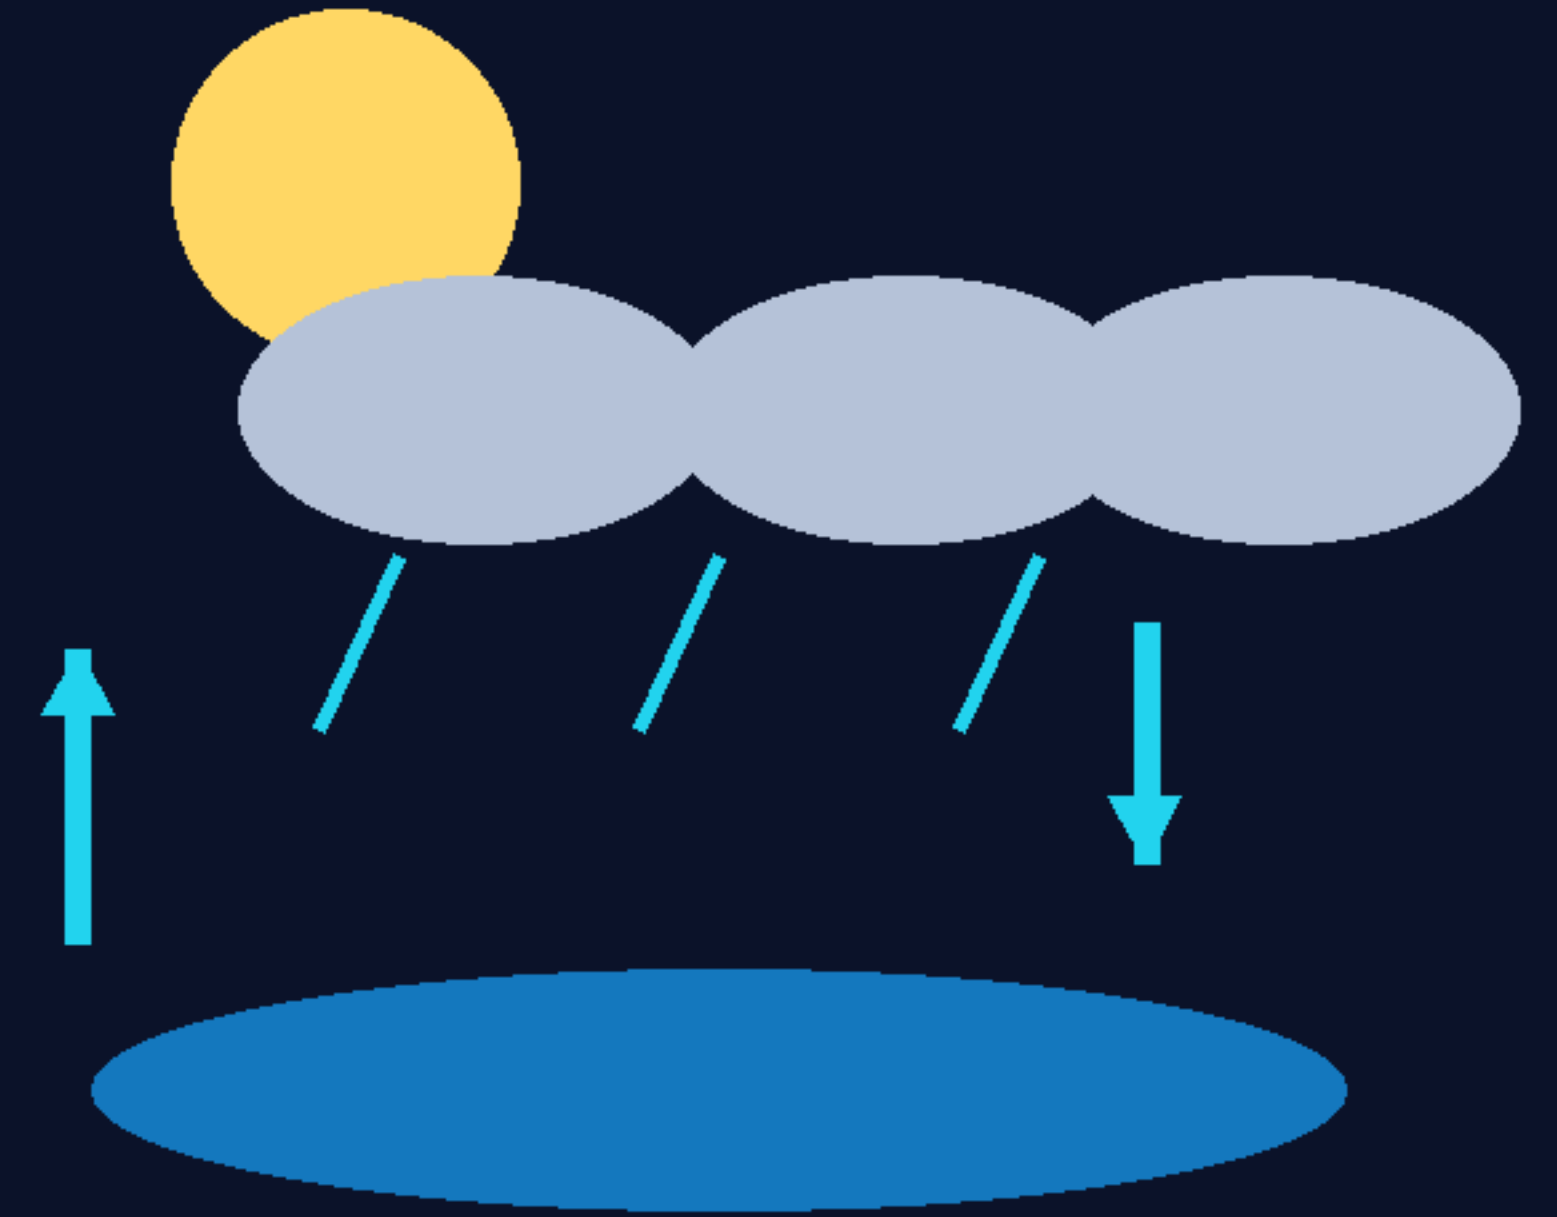

Quick check Where does rainwater go after it falls?

Waste and Recycling

Waste should not be thrown anywhere. Wet waste and dry waste can be separated. Paper, plastic, glass, and metal can often be reused or recycled. Reducing waste keeps surroundings clean.

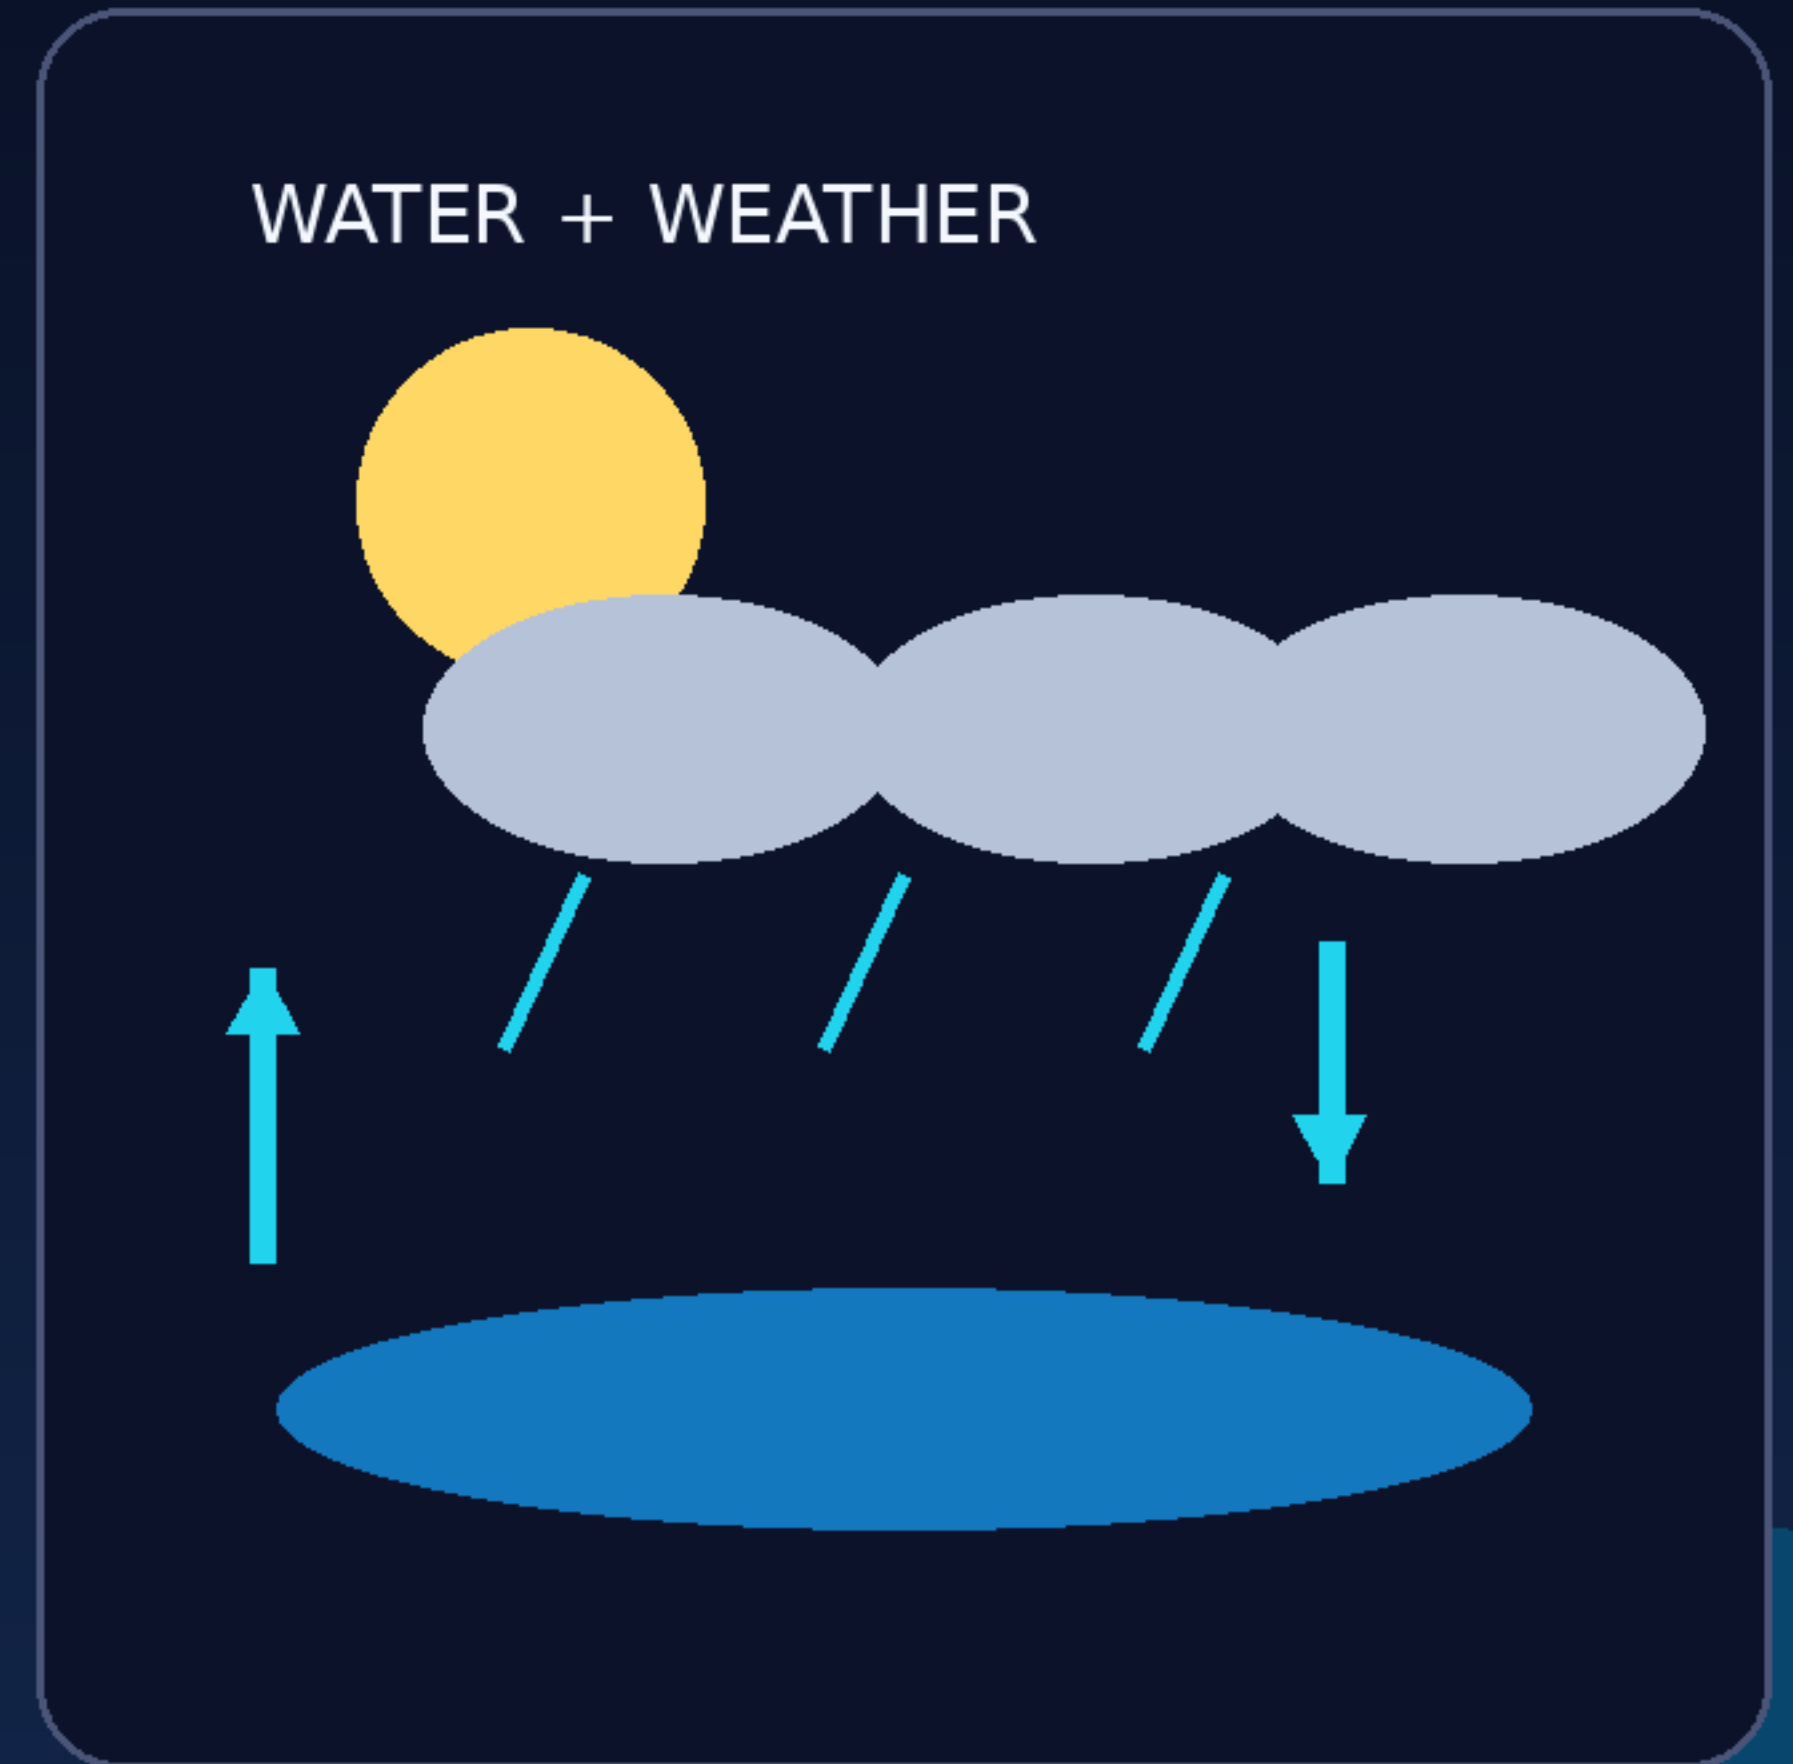

Quick check Where does rainwater go after it falls?

WATER + WEATHER

Protecting Environment

The environment includes air, water, soil, plants, animals, and people. We protect it by saving water, planting trees, avoiding litter, reusing materials, and respecting animals. Small actions matter when many people join.

Quick check: Where does rainwater go after it falls?

Recap Quiz

Let us revise. Name two water sources. What is evaporation? Why does rain happen? What is weather? How can we save water and protect air? These answers connect water, weather, and environment together.
