

Why Is the Sky BLUE?

White Light = ALL Colours Mixed

Molecules Much Smaller Than Light Waves

Blue scattered 16x MORE than red

**Blue Light Bounces Everywhere. You See
It From Every Direction.**

Physics + Biology = Blue, Not Violet

**Sunset = Light That Survived the
Longest Journey**

Mars Has Blue Sunsets. Mind = Blown.

**More Atmosphere = More Scattering =
Paler Sky**

**Rayleigh = Blue Sky. Mie = White
Clouds.**

The Physics Behind λ^4

Blue Sky = Clean Air
