

What Causes the **NORTHERN** LIGHTS?

**It all starts with the SUN — the solar
wind**

**Earth's MAGNETIC FIELD = our invisible
shield**

Poles = weak spots → particles sneak in

Particles SMASH into oxygen & nitrogen

Excited atoms RELEASE energy as LIGHT

Green = oxygen

Red = high oxygen

Solar storms → SUPER bright auroras

**Best seen near the POLES — even on
other planets!**

Sun → wind → shield → poles → glow!

1) Sun's particle stream? 2) Earth's shield? 3) Green color gas?

1) Solar wind 2) Magnetic field 3)
Oxygen
