

How Does a Camera CAPTURE a Photo?

No light = no photo

**Lens bends light → focus (image is
flipped!)**

Aperture = light hole

small f = MORE light

Shutter speed = freeze or blur motion

Sensor: light → electric signal

RGB filters build every colour

Signal → numbers → digital image

**Processor + AI = computational
photography**

More megapixels ≠ always better

Quick Brain Check!

1.2.3 → PAUSE

Answers: Focus · Electric Signal · Bayer
RGB
