

Why Do We BLUSH?

**Vasodilation = vessels widen + more
blood = red, warm cheeks**

Sympathetic Nervous System: your body's alarm switch

Adrenaline fires the FIGHT-or-FLIGHT response

**More vessels, thinner walls, closer to
the surface**

**You can't control it — it's
INVOLUNTARY**

**Only HUMANS blush — the most human
expression**

**Embarrassment, praise, crush = all eyes
on you**

Blushing signals: I'm honest, I care

**Fear of blushing → makes you blush
MORE**

**Moment → Nerves → Adrenaline →
Vessels → RED!**

Quick Brain Check! Pause & answer (3 Qs)

**Answers: 1) Widen / vasodilation 2)
Adrenaline 3) No!**
